Life365[®].health

Remote Care Management to Optimize Clinician Workflow

Life365's clinical portal gives healthcare professionals the ability to review patient population health data collected for remote care monitoring services.

Data includes vital sign information collected from connected medical devices and submitted responses provided from symptom assessment and engagement surveys.

Data transmission is secure, encrypted, and HIPAA compliant.

Compatible with HIPAA and HITRUST Requirements

The security of our customers and their patient's information is priority one.

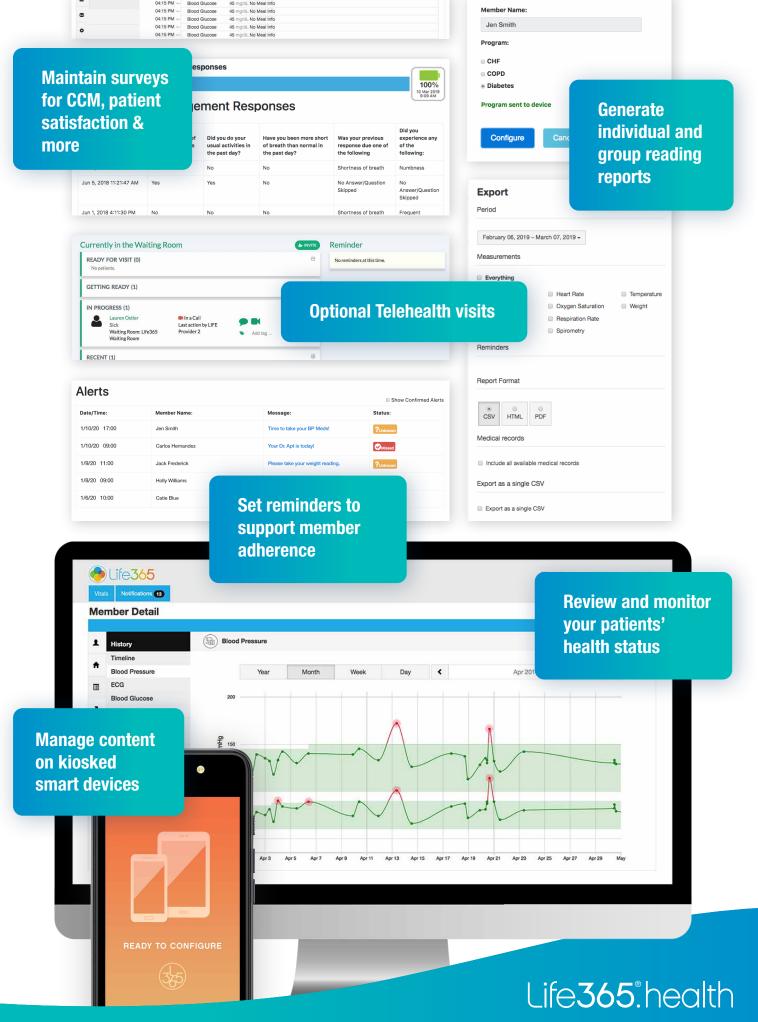

- HIPAA compliant platform and system
- Adherence to HITRUST standards
- Encrypted data transmission
- Secure Amazon cloud-based servers
- SSL and TLS encryption layers
- Internal and third-party security reviews
- BAA required

Coordinator Portal Core Functions

- Establish & review breached vital sign threshold parameters for patients
- Assign survey questions for patients
- Review patient population health data & survey responses
- Assign, remove, & reassign provider-supplied smart devices
- Assign and update educational content
- Generate patient reminders for medications and appointments
- Generate group and individual reports, review charts and graphs

Manager Portal Core Functions

- Create, edit, archive, and delete: Manager, Coordinator, and Patient accounts.
- Assign and remove Coordinators from Patients.
- Review platform statistics (number of account registrations, active users, active record, and measurements captured) by day, week, month, and year.
- Create notes on Patient accounts/profiles.
