Microsoft **integrated** a virtual care and remote patient monitoring platform into its healthcare cloud.

Life365 Virtual Care Platform will provide access to more than 400 medical devices intended for home care and connect that data to Microsoft Cloud for Healthcare, according to a March 22 announcement. The integration will allow remote patient data monitoring to be accessed through the cloud.

The integration aims to help healthcare professionals expand remote patient monitoring to a larger population of patients and remove or reduce interoperability issues.
