## Enabling Patient Care @ Home

## Engaging Patients Beyond the Point of Care.

Anytime. Anywhere.

### Microsoft Cloud for Healthcare

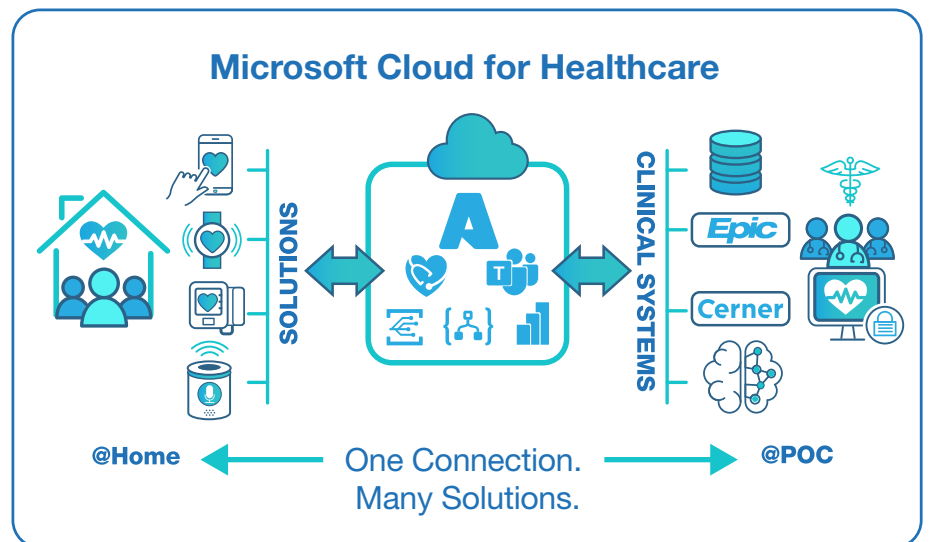

brings together trusted partners and integrated capabilities that make it easier to connect with patients at home and improve the entire healthcare journey for both patients and providers.

Microsoft's integrated, outcomes-focused AI solutions help to increase patient engagement, empower health team collaboration, and enhance clinical and operational data insights – which help improve efficiencies and decision-making.

### Microsoft Partner

Life365 is an integrated, embedded partner with Microsoft Cloud for Healthcare.

### Life365 Virtual Care Platform

is an integral component to Microsoft Cloud for Healthcare (MC4H), connecting large enterprise healthcare providers to patients outside the walls of the hospital – at home, and beyond. The Life365 platform provides *Virtual Care as a Service*, utilizing a variety of solutions including software, devices, partner support, and logistics services.

The platform offers more ways to connect with patients at home – using their own smart devices with Life365 apps integrated with over 400 medical devices to choose from; using completely preconfigured Life365 smart devices for Remote Patient Monitoring (RPM) and telehealth, or Life365 integrated IoMT Hubs with embedded WiFi and cellular options.

All Life365 / MC4H solutions securely deliver patient generated data wherever it's needed to optimize enterprise clinical and operational workflow.

## Connecting through the Digital Front Door – with More Integrated Services to Support Your Programs and Patients

### Tailored Programs / Personalized Care

The Life365 team can help setup and support all phases of your RPM programs.

The Life365 team can help setup new RPM programs with training and ongoing support for our enterprise clients, as well as provide integration services to help augment enterprise teams to complete onboarding and integrations quicker. Our teams can configure and ship kits directly to patient homes, or provide delivery to the point of care.

Based on volume, Life365 kits (and many of our products) can be white labeled, and the Life365 team can assist with creating tailored marketing materials, and instructions for setup and use.

As part of the flexible pricing structure, Life365 can provide resources to perform API and clinical backend integration, technical workflow consulting, training, and Tier-2 and 3 support of the connected solutions in the patient's home. Pricing is based on the number of patients on the system.

## One Platform. More Options.

Microsoft | Azure Marketplace

### Life365 RPM Kits

Remote Care Simplified. Expand virtual care services to your patients – easily and quickly.

[See More RPM Kits @Azure Marketplace](#)

Give patients the tools they need to easily get connected for your remote patient monitoring programs. Kits contain a curated selection of Bluetooth medical devices, with optional smart devices and cellular / WiFi connectivity – to address chronic management for conditions such as diabetes, hypertension, CHF, COPD, and weight management. Life365 Turnkey Kits can be pre-configured with apps and content personalized for your specific population requirements. Compatible with hundreds of medical devices from a variety of manufacturers.

### Life365 Health App

Makes tracking and reaching health goals easier. Simple to use. Automatically records vital signs to share with care teams and family members.

For self-managed patients and those who can use their own smart phone or tablet. Share progress and export reports in various formats. Includes secure bi-directional messaging with care teams.

Available for Apple iOS & Android

**Free download and standard use.** Premium features and data handling pricing varies based on program. Devices not included.

### Life365 Demo Kits

Out of the box, ready to go. These connected solutions allow you to experience the real system – in real time.

Life365 provides **2 RPM Kits** connected to a test environment (not designed to be used with actual patients). The pre-configured Life365 Turnkey Solution and the Life365 Health App are available for a “test-drive” on the Life365 platform. Kits include: Bluetooth weight scale, blood pressure monitor, pulse oximeter and glucose meter with 50 Strips. The Life365 Demo program helps new clients become familiar with platform capabilities, use of devices, an better understand and design an RPM workflow that meets their populations’ needs.

### More Life365 Support & Services

#### Life365 Support

Our support plans provide help with defined customization of RPM programs, Tier-1 support training of key client personnel for, and follow-on support of patients (via client personnel) after receiving their equipment at home. Life365’s Support team can assist with distribution, equipment operation, and issues that might arise regarding connectivity or communication into the client clinical backend systems.

[Life365 Support Services @Azure Marketplace](#)

#### Life365 API Data Connect

For a monthly service fee, this plan provides and maintains the passing of data via API’s into clients’ backend systems. Plan does not include the use of Life365 clinical portals or on-going customer support – other Tier-3 support for replacement of equipment or connectivity issues, if purchased from Life365.

[Life365 API Services @Azure Marketplace](#)

#### Life365 Integration Services

Integration services cover data exchange into the Microsoft Cloud for Healthcare platform and the enterprise client’s clinical backend.

[Life365 Integration Services @Azure Marketplace](#)

#### Life365 RPM Consulting Services

The Life365 brings over 15 years of Digital Health experience and installing RPM programs for enterprise clients. The team is available to provide consulting services to help structure an RPM program.

[Life365 Consulting Services @Azure Marketplace](#)

#### Life365 Annual Platform Subscription

This fee covers the setup of individual client’s secure cloud environment for storing patient generated health data, collected through the platform, compliant with security and privacy standards including HIPAA.
