# Quickstart Guide

## Tenovi Hub

### Step ONE

Using the provided power cord, plug the pronged end into a power outlet, and the smaller end into the side of the Tenovi Gateway Hub. Wait for the light on the Hub to turn red.

### Step TWO

Take a daily device measurement, or as directed by your care team. The Hub will turn YELLOW when a reading is being taken, and turn GREEN when the reading is transmitted successfully.

**YELLOW:** a reading is being taken

**GREEN:** the reading is transmitted successfully.

*For further assistance, please contact your care team.*

*Read the device manufacturer instructions for operation and safety before use.*

# COLOR INDICATOR GUIDE

## Green

If the light ring is green, this indicates you have taken your readings for the day.

## Red

If the light ring is RED, this indicates you need to take measurement readings for the day.

## Yellow

If the light ring remains yellow, this means your readings have not been transmitted. Wait 15 minutes. If still yellow, move the hub to another location with better signal.

## Flashing Blue

If the Hub flashes blue for more than 30 seconds, unplug the power adapter, wait 5 seconds, and plug the power adapter back into the Hub.

## Flashing Red

If the LED ring flashes RED after you take a reading, you have triggered a measurement reading alert. If this happens, take one more reading.
